

twenty20: Efficiency potential of the Open Telekom Cloud exploited

twenty20 supports its customers throughout the entire application lifecycle. In addition to consulting and development services for customer-specific applications and their further development, twenty20 also offers the operation and hosting of applications as a managed service.

Challenge

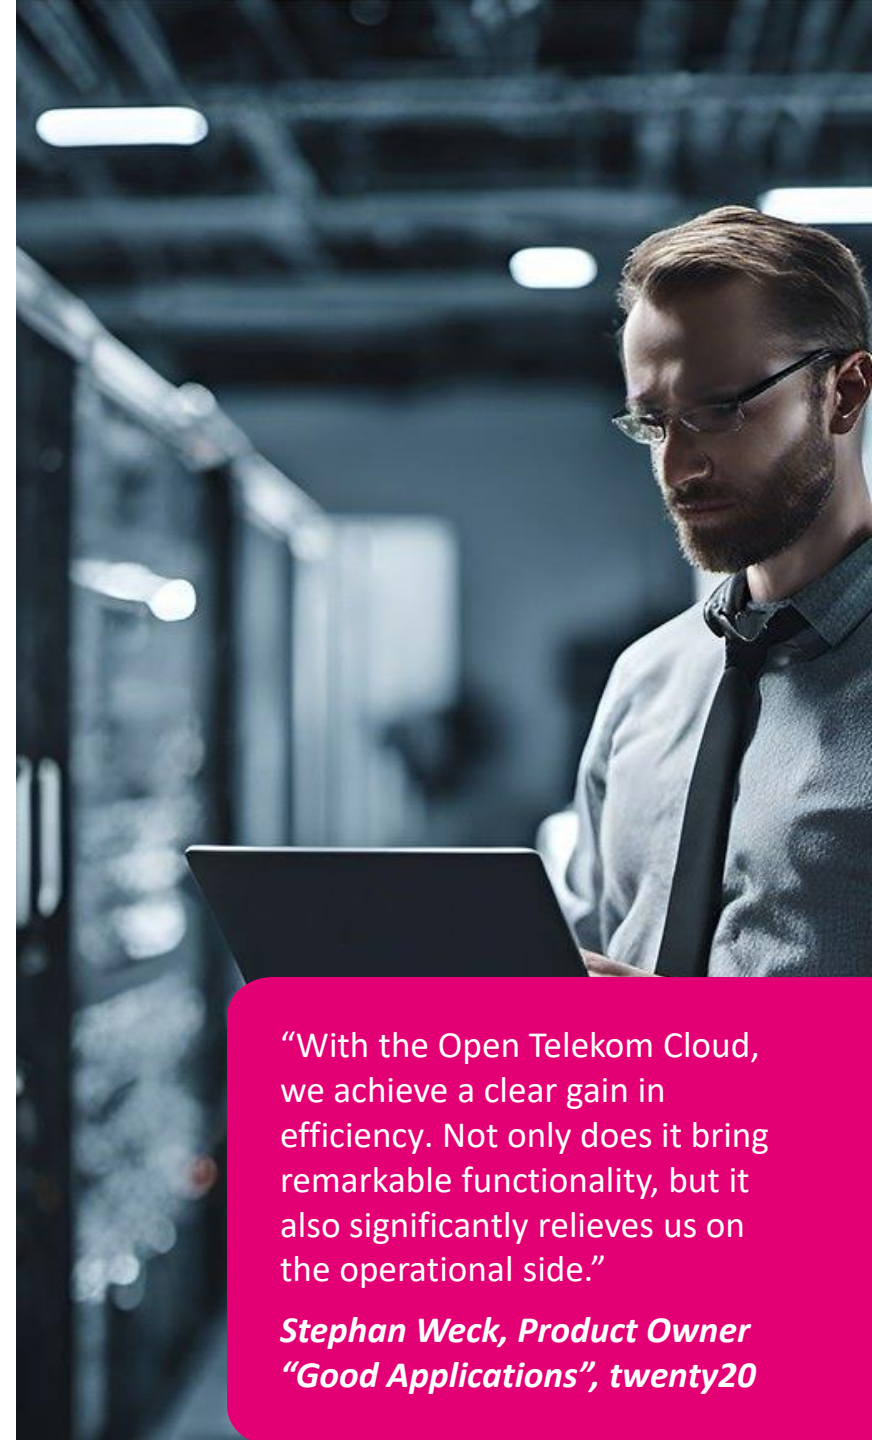

- Stronger focus on application development and managed services
- The partner for non-profit companies: Focus on open source and sustainability
- Decommissioning of own hosting platform
- Replacement with German platform that fits corporate philosophy

Solution

- Migration of the complete application landscape to the Open Telekom Cloud: customer-specific applications, partner solutions and SaaS services
- Development support
- Infrastructure as Code and container deployment with Terraform and Cloud Container Engine
- Leveraging partner support and community

Customer benefit

- Large gain in efficiency, stable operating platform
- Quick set-up of development projects
- New business area Migration and Managed Services for Open Telekom Cloud
- Open Telekom Cloud as a sustainable platform in line with the twenty20 corporate culture

“With the Open Telekom Cloud, we achieve a clear gain in efficiency. Not only does it bring remarkable functionality, but it also significantly relieves us on the operational side.”
